

We effectively acquire subsidies for enterprises throughout Poland. We achieve a high success rate thanks to the individual approach to each Client.

We have an extensive network of partners which we are constantly developing. In order to prepare specific applications, specially dedicated, interdisciplinary teams of specialists are formed in which representatives of universities, research institutes and business environment institutions as well as the industry experts can be found.

Concepts for R&D projects

We create a comprehensive path for the implementation of R&D projects which develop products or technology – in compliance with the principle from the concept through the projects and making a functional prototype.

Research agenda

We carefully and exactly plan industrial research, development and pre-implementation work which are required in order to achieve the goal of the project, whilst highlighting our client's strengths.

In our work, we base on the experience gained in the course of several dozen projects, implementations, expert opinions and commissioned work in which we combined the two worlds of science and business. We have completed or we are currently implementing projects for foundries, forging shops, stamping shops, press shops and steel mills manufacturing components for the aircraft, automotive, military, railway, machine-building, ship-building, power engineering, oil and many other industries. These projects concern the development of completely new products or production technologies. Many of these projects were financed with the funds that we previously acquired. We support our Clients throughout the entire duration of the project.

Contest documentation

We prepare all the necessary documents stipulated in the regulations, such as applications for funding, feasibility studies, business plans, opinions about innovativeness and other necessary appendices.
